

```
val echo: HttpHandler = {
  req: Request -> Response(OK).body(req.body)
val resp: Response = echo(Request(POST, "/echo").body("hello"))
```

Concept: Service HttpHandler

"It turns an HTTP Request into an HTTP Response"

ie. it's a function!

HttpHandler: (Request) -> Response

```
val echo: HttpHandler = {
    req: Request => Response(OK).body(req.body)
}
val resp: Response = echo(Request(POST, "/echo").body("hello"))
```

Concept: Filter

"Provides pre and post processing on an HTTP operation"

ie. it's a function!

Filter: (HttpHandler) -> HttpHandler
